| Allocated costs | 33 |
| Retained Costs | 33 |

Executive summary

This In-house vs External Toolkit is designed to enable local authorities to analyse their In-house service provision costs against the equivalent external costs. The toolkit has a number of potential applications, including:

- demonstrating to other parts of the organisation (e.g. council members) what the true equivalent costs are, taking into account costs which would be incurred regardless of whether the service was in-house or not (retained costs);
- forming the basis for a business case for externalising or retaining services;
- identifying potential efficiencies within in-house services; and
- informing internal pricing, where in-house services are 'charged' within the context of a personal budget.

It ensures equivalence via collecting information about:

- The nature of the service being provided – are there differences which would warrant different costs?
- The quality and performance of the service being delivered – does this warrant premiums?
- The detailed breakdown of in-house costs – are there costs which could be avoided? Are there costs which would be there regardless? and
- The equivalent cost were the in-house service to be externalised. Would the in-house services command premium pricing from the external market?

This document explains, in logical steps, how to complete the In-House vs External Toolkit. Two councils have contributed to its development: West Berkshire and the Royal Borough of Windsor and Maidenhead.

RBWM has worked very closely with Regional Improvement and Efficiency agencies to great effect. None more so, than the benefits which it has derived from working closely with CSED in various aspects of adult services. CSED have supported us in relation to a number of initiatives, and we are delighted that we have not only been able to benefit from their knowledgeable support and assistance in our Domiciliary Home Care project but also, hopefully, we have been able to offer something back as we have developed the application of their methodology in our own review of internal Domiciliary Home Care.

CSED are held in particular high regard at RBWM and we would certainly have no hesitation in recommending that any Council, who is embarking on a review of their Home Care with the objective of either improving the service or making efficiencies, or in our case both, should regard the CSED and their tool-kit as the first port-of-call.

Gary Richardson

Head of Business Development

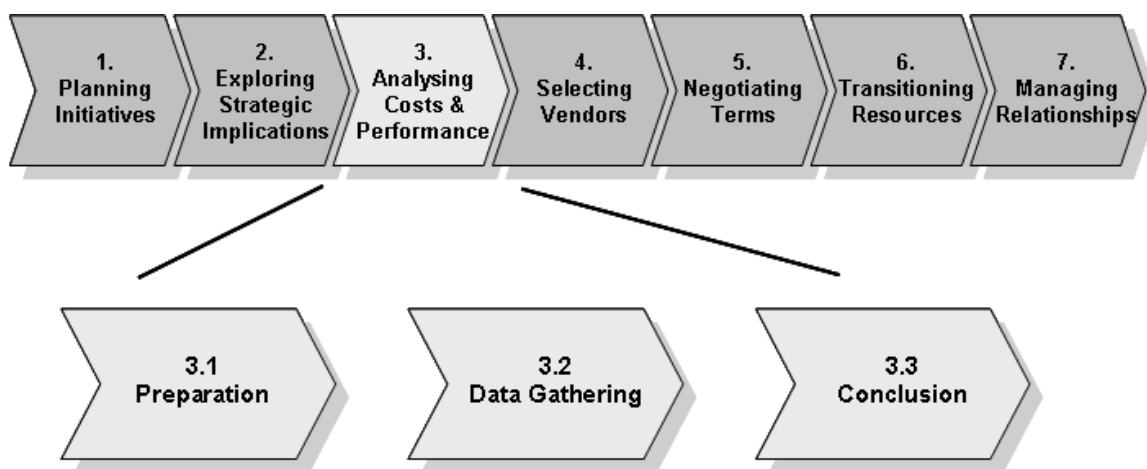

Royal Borough of Windsor and Maidenhead

Introduction to the toolkit

The toolkit in the context of the overall contracting process

A typical contracting cycle encompasses the following typical sets of activities. Only step 6 (Transitioning Resources) is specific to a transfer of services.

Within the context of this overall cycle, this toolkit focuses on step 3 (Analysing Costs & Performance). It is also specifically relevant to services.

The toolkit breaks step 3 down into the three phases of activity illustrated within the figure. Each of these is in turn sub-divided into 4 steps for the purposes of the methodology.

Thus, the structure of this toolkit may be summarised as follows:

| 3.1 Preparation | | 3.2 Data Gathering | | 3.3 Conclusion | |
|-----------------|-------------------------|--------------------|----------------------------|----------------|---------------------|
| 3.1.1 | Appropriate sponsorship | 3.2.1 | Service comparison | 3.3.1 | Preparing the story |
| 3.1.2 | Pre-meeting | 3.2.2 | Performance comparison | 3.3.2 | Validation session |
| 3.1.3 | Terms of reference | 3.2.3 | Equivalent external costs | 3.3.3 | Feedback |
| 3.1.4 | Kick-off meeting | 3.2.4 | In house retained analysis | 3.3.4 | Next steps |

Customising the toolkit to meet specific requirements

The toolkit is a starting point and will benefit from customisation by each council to suit the particular needs of a particular service. To this end it includes a number of templates in either MS Word or MS Excel format which can be adapted to a specific application.

Using the templates

All of the templates illustrated in the MS Word version of this document are embedded objects. This means that, in addition to the separate MS Excel files, you may double-click on any of the illustrations to get access to the underlying spreadsheet. (This feature is obviously not available in the Adobe pdf format version).

The Examples

The examples used within this toolkit are illustrative. Whilst based on live examples, all of the figures have been edited to retain the illustration but remove the linkage to the original data.

Analysing Costs & Performance

Step 3.1: Preparation

Like all project management activities, good preparation can make the difference between success and failure. Given that the topic itself can create concerns with the staff involved, and that much of the data required for the analysis is of a sensitive nature, it is critical that this work has the support and buy-in of the functions involved.

Expanded on below, preparation consists of:

- Appropriate sponsorship;
- A pre-meeting;
- Establishing a terms of reference; and
- A kick-off meeting

3.1.1: Appropriate Sponsorship

Before any work begins its vital to ensure that the appropriate project support is in place. It is worth taking the time to chose an appropriate sponsor for the project. This should usually be at Assistant Director or even Director level since the work requires support from across the directorate and from senior managers from other parts of the organisation. For the purposes of this document, we refer to this latter collective senior management group as the Stakeholder Group. The precise makeup of the group should be discussed and agreed with the project sponsor. Typical positions to include are:

- Relevant Assistant Director
- Head of Adult Social Care, and also (if appropriate) Heads of Occupational Therapy, Physical, Mental and Learning Disabilities
- Head of Care Management Data or relevant senior manager from IT
- Head of Commissioning / Provider Costs
- Head of Finance
- Head of Performance
- Nominated Project Manager

3.1.2: Pre-meeting

The pre-meeting will usually involve the Sponsor and a sub-set of the Stakeholder Group (specifically the manager responsible for the service under discussion and the Project Manager designate).

The purpose of the pre-meeting is to ensure that the organisation is clear about where it is in terms of readiness to undertake the work. Any discussion involving a comparison between internal and external services, if inappropriately handled, can lead to significant concerns from the staff under review. The outcome of the work will almost certainly involve change of some form or another (otherwise there is little point in carrying out the exercise).

With this in mind, Appendix A includes a 'readiness checklist'. Its purpose is to ensure clarity of objective, to capture how far down the track you have already gone and, importantly, the extent to which the exercise can be communicated.

A typical agenda for this meeting, which is likely to last about an hour, will include:

- An explanation of the current situation from the perspective of the Sponsor.
- A walk through the readiness checklist. Check each section, understand where the council is and make sure that you challenge yourself against each section. An extract from this checklist is illustrated below.
- Identify primary contacts to seek access and support from other departments for data collection. Reports and data will be required from various departments and it will help the project team if an agreement is reached at a senior level before they engage in this activity; and
- Confirmation of the Project Manager (this individual should be respected across the organisation, since it is important to be able to open doors and unlock any potential barriers to access to data).

CSED : In-house vs External (or Reorganisation) Readiness Checklist

| | | | | | | | | | |
|--|---|---------------|--------------------------|-----------------|--------------------------|-----------------|--------------------------|-------------------|--------------------------|
| Reasons for considering reorganising/externalising | Enhance effectiveness by focussing on what you do best | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Increase flexibility to meet changing requirements | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Enable a broader transformation agenda | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Improve service user satisfaction | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Improve operating performance (productivity) | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Obtain expertise and skills | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Improve management and control | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Reduce investments in assets (& free up resources for other uses) | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Reduce costs through provider superior performance and lower cost structure | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Turn fixed costs into variable costs (increase flexibility) | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Overcome resistance to change | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Stated organisation policy | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |
| | Other : | Not important | <input type="checkbox"/> | Minor objective | <input type="checkbox"/> | Major objective | <input type="checkbox"/> | Primary objective | <input type="checkbox"/> |

| Check list summary – are you ready to proceed? | Yes / No |
|---|----------|
| Review the checklist as outlined above. You will need most of your answers to fall in the right hand side column to proceed. Make sure your comfortable with the result and communicate it through your existing communication channels to all relevant parties. It would be worth considering strategies to bolster areas that score poorly. | |

If you are not ready, delay the work.

3.1.3: Terms of reference

Given the need to access many parts of the organisation, it is essential that the Project Manager has a clearly agreed terms of reference which can be used to communicate the rationale and approach being taken for the project.

Using the output from the pre meeting, prepare an initial Terms of Reference document. A template for this is included in Appendix B, populated to illustrate the intended use of each heading. Use the template as a guide and amend it to suit your specific requirements. Once this document has been drafted, circulate it to the Stakeholder Group for their review and sign-off.

The terms of reference covers the following:

- Overall goal;
- Specific primary objective/s
- Specific secondary objective/s
- Specific deliverables;
- Required inputs; and
- Engagement timetable

3.1.4: Kick-Off Meeting

Kick-off meetings are used to initiate data collection activities with individual departments. It is worthwhile assembling the senior manager responsible for the department (the full Stakeholder Group) and the individuals required to actually collect the data; this will ensure that everyone has a shared understanding of the data collection requirements and timeframes and that if there are any questions or concerns, they are raised in an open environment.

We would recommend contacting all members of the full Stakeholder Group and invite them and the individuals most likely to be involved to the meeting. The first part of the terms of reference provides a useful basis for an email which is also likely to include:

- Overview of the project goals and objectives.
- Reasons for seeking their attendance.
- Location & agenda.

The output from the meeting should aim to:

- Get buy-in to the terms of reference and answer any questions;
- Agree named individuals to provide data; and
- Agree time scales.

It should be possible to get hold of most of the required information with relatively little effort. The key here is to get the best information which is readily available immediately rather than initiate an in-depth data extraction process. Initial conclusions are usually able to be made based on experience and routinely available management information. The final output from this initial exercise will highlight where assumptions have had to be made and should recommend in-depth analysis only where required as part of any follow-up actions.

Step 3.2: Data Gathering

This section provides a summary of the four data templates and the type of information required to populate each one. Full versions of the templates are included in Appendix C. The templates also include information on the type of information required and where that information might be sourced.

3.2.1: Service Comparison

This data template captures the differences in the nature of service provision across your service providers.

The purpose of the template is to ensure that service providers are compared on a like-for-like basis, and that costs can be normalised to reflect any differences.

The specific care types may be as long or as short as you like – Appendix C includes examples used by two councils.

| Homecare Providers | Supplier A | Supplier B | Supplier C | Supplier D | Supplier E | Supplier F | Supplier G | Supplier H | Supplier I | Supplier K | Supplier L | Supplier M | In-House |
|--|---------------|----------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|----------------|---------------|---------------|----------------|
| | Local | Nat | Nat | Local | Local | Regional | Local | Nat | Local | Local | Local | Regional | In-House |

| M-F 15 minute calls per week | 71 | 103 | 45 | 11 | 20 | 14 | 56 | | 124 | 145 | 77 | 4 | 636 |
| M-F 30 minute calls per week | 423 | 348 | 159 | 146 | 164 | 189 | 327 | | 720 | 1089 | 426 | 421 | 1346 |
| M-F 45 minute calls per week | 70 | 63 | 12 | 14 | 55 | 34 | 89 | | 101 | 225 | 63 | 52 | 488 |
| M-F 60 minute calls per week | 83 | 590 | 9 | 13 | 82 | 389 | 38 | 239 | 79 | 168 | 181 | 528 | 27 |
| W/E 15 minute calls per week | 25 | 36 | 18 | 4 | 8 | 4 | 22 | 0 | 46 | 54 | 30 | 2 | |
| W/E 30 minute calls per week | 148 | 143 | 59 | 58 | 62 | 78 | 116 | 0 | 270 | 399 | 160 | 160 | |
| W/E 45 minute calls per week | 24 | 22 | 2 | 4 | 22 | 10 | 30 | 0 | 36 | 81 | 19 | 26 | |
| W/E 60 minute calls per week | 19 | 248 | 2 | 4 | 26 | 138 | 10 | 0 | 14 | 42 | 28 | 95 | |
| No. of Intensive Packages (over 10 hrs) | | | | | | | | | | | | | |

The high level volumes and contract utilisation figures are useful to gain an understanding of the volumes and nature of business each provider (whether in-house or external) is handling.

This matrix can be useful in itself. Quite often patterns emerge which can inform future strategy. For example, it is usually the case that at least some of the external providers will be providing services which are directly equivalent to the in-house team – are there providers who would be able to take on reablement and rapid response, for example? There may be patterns which highlight the specialist roles of some of the smaller providers – could some of these specialist services be used in a more imaginative way with complex cases? and so on.

3.2.2: Performance Comparison

The purpose of this data template is to establish the difference in performance and/or quality between your service providers.

This might explain the reasons behind inconsistencies in fees being paid to different service providers for a seemingly similar service.

| Homecare Providers | | Supplier A | Supplier B | Supplier C | Supplier D | Supplier E | Supplier F | Supplier G | Supplier H | Supplier I | Supplier J | Supplier K | Supplier L | Supplier M | In-House | | | | |
|---|----------------------|------------|------------|------------|-------------------------|------------|------------|------------|------------------|------------|------------|------------|-----------------------|------------|------------------|----------------------|----------|----------|-----|

| Carer Consistency and Skills Apr-06 - May-07 | | | | | | | | | | | | | | | | | | | |

Note that, in this example, the comparison extends beyond regulatory / external inspection ratings to include specific statistics covering:

- Brokerage team feedback;
- Complaints; and
- User survey results.

It the case of most social care services, this list could be expanded to include things like:

- Invoicing accuracy;
- Number of placement rejections; and
- The council's own rating system.

Such differences could then be factored into the internal vs external comparison.

This analysis can also be used to factor into provider feed-back mechanisms such as contract reviews. For a number of councils this may be the first time overall performance has been brought together all in one place.

3.2.3: Equivalent External Costs

Now that our related product, Tool for Rapid Analysis for Care Services (TRACS), has matured we would normally use TRACS to analyse the impact of moving internal services to the external market.

The idea is to normalise external costs to reflect the mix of services being provided by the in-house service and thus reflect any premium prices which may be in place.

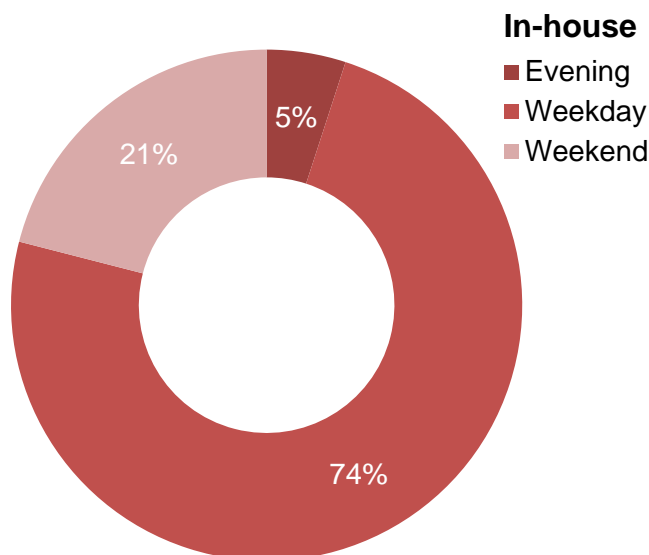

In this illustration, the council paid premium rates to the external market for out-of-hours services. They believed that the in-house team did more out-of-hours calls than their external colleagues and that the external unit rate should be increased to reflect this difference.

As can be seen from the figure, when it came to the analysis, it was found that the external market actually supplied more out-of-hours services. If the in-house services were added to the external mix it would have had the opposite effect of decreasing the comparable unit rate. This highlights another benefit of the approach – it serves to correct any misplaced perceptions regarding the services.

The easy things to factor into the analysis include:

- The mix of out-of-hours activity;
- The mix in visit length (shorter visits are often relatively more expensive);
- The geographical spread of activity (distance to get to the service user); and
- The service mix (i.e. if there are special services which have an obvious linkage to premium prices).

It is obviously more difficult for the quality and performance dimensions to be factored into a numerical analysis. Judgements will usually have to be made in the final analysis about the 'value' of such dimensions.

Step 3.3: Conclusion

A report is drafted that brings together the data analysis, draws conclusions, and recommends the externalisation or retention of in-house services. A generic report template is provided below as a suggested guide, plus a suggested approach for validating and obtaining agreement to the report's recommendations. Please modify the report template to suit your specific needs.

3.3.1: Preparing the story

Who is the audience? What do they expect to see? Your immediate audience for the report is the project sponsor, however the sponsor will also need to share the report, so it's worth considering where the report will ultimately end up and therefore the format, level and content that you draft.

Reports in PowerPoint are quicker and easier to draft than in Word, and are a better format for conveying your message using graphs and tables. A good method for removing the detail from the document is to tell a short story in the main document and use appendices for the detail to back the story up (like this document).

Suggested report template:

1. Project Goal: state the overall objective(s) that you set out to achieve.
2. The Issue: use this section to describe the issue(s) that you set out to fix. For example, PSS/EX reported unit costs of internally-provided home care might be higher than those of external providers.
3. Facts & Figures: you will need to include a section detailing (at a reasonably high level) the data behind the Issue. The major purpose of this section is to build a case for change based on the data. Well laid-out data will often tell its own story, so it's important to explore the data for highlights or aberrations and to structure this section so that it leads the reader to a logical conclusion. Use high level data only; if you need to include more detail, use an appendix.

As an example, below is the data analysis (headings only) used by one local authority for this section of the report for their homecare services:

- a. Internal Spend: broken up by key profit & loss line items, including income, and details including spend across the in-house service areas (if they exist), for example normal in-house spend versus rapid response or reablement. Include a Totals column here too.
- b. Internal Activity: provide a comparison of the hours worked within the different in-house service areas.

- c. **Cost per Hour (Gross):** this is the total cost for the in-house service split by service area, divided by the number of hours recorded for each. This will provide a cost per hour for each service area.
 - d. **Internal Dom Care – Actual & Reported Hours:** Use a graph to plot actual hours of service provision against the hours reported in the PSS/EX returns. Experience shows that there will be differences here, perhaps significant.
 - e. **Cost per Hour – Gross versus Net:** Use this section to split-out management on-costs from the in-house service numbers, to get direct client-facing time. Then calculate the cost per hour splitting our management on-cost time.
4. **Service Comparison with External Providers:** Here the internal service is benchmarked with the external providers.
 5. **Staff and Costs:** In this section list the positions, FTE numbers, gross and total pay for the in-house service. Include the management team for a complete picture.
 6. **Client Facing versus ‘Non-Value Added’ Time and/or Costs:** Please see the In-House Retained Costs Template. The chart illustrated below is not untypical for in-house homecare. Note the relatively high sickness levels (good in comparison to some councils). Is this a symptom of exposure to illness or a function of poor morale? (evidence from one councils suggests that the latter can be a major factor). What could be done to reduce the travel time?
 7. **Transfer versus Retained Costs:** Similar to 6 above, please see the In-House Retained Costs Template included in Appendix C for a suggested way to detail this information.
 8. **Potential for Long Term Gain:** Use a single page to describe your recommendations for change. Use subsequent pages, if required, to highlight the reasons behind your recommendations. Keep this section high level; the detail is provided in the appendices if required.
 9. **Potential for Short Term Gain:** This is a single pager that lists, at a high level, the major areas that this report highlights as having the potential for short term gains. This is quite important, senior management will want to see a fast return for their investment in a changed strategy. The short term gains should build towards the attainment of the long term gains outlined in the previous section.
 10. **Conclusion:** You might want to include a single page that states, very briefly, the goal, issue, and recommendations.

3.3.2: Validation Session

To help engender buy-in to the report it is worth re-assembling the stakeholder group and talking them through the report at a high level, including the recommendations. During this session any high level concerns or issues can be dealt with by the larger team, with the project sponsor present.

- Start with the project sponsor, and talk him/her through the report and the conclusions that you've drawn. Modify the report as required before you proceed to the Validation Session.
- Discuss with the sponsor who should be on the report's distribution list for comment. Try to keep the group small; it is very difficult to manage a large group for this kind of exercise.
- Assemble the stakeholder group and any other people identified to critique the report, and talk them through the report at a high level, with the Project Goal, the Issue and the Recommendations highlighted.
- Ask the group for feedback, and document the comments and concerns. Resolve as many concerns as possible within the group. To that end, it is vital that this session includes the project sponsor.
- Close the session and inform the group that you will be issuing the updated draft report for comment. Tell them how long they will have to respond to the draft.

3.3.3: Feedback

Allowing stakeholders to provide feedback to the report is a formal way of conducting a dialogue across a group of people, and is a powerful tool for obtaining group-wide agreement to an issue or proposition.

- Incorporate the feedback from the Validation Session then issue the report as a draft to the stakeholder group. Ensure that there is a clear deadline for stakeholders to respond. Issue a reminder a few days ahead of the deadline.
- Incorporate stakeholders' comments into the report. If you don't agree with a comment or suggestion, discuss with the relevant stakeholder and escalate to the project sponsor if necessary. All stakeholder questions, concerns and comments should be addressed before the final report is issued.
- Remember, the purpose of the validation session is to ensure that the stakeholder group agrees with the report before it is issued as a final.

3.3.4: Next Steps

Once the report is issued as a final, the project sponsor can use it with the appropriate management groups and/or members for ultimate signoff to the recommendations.

It is highly likely that the report will recommend more in-depth analysis in certain areas where there are gaps and/or assumptions have had to be made. As stated earlier on, we would recommend you do a first pass of the toolkit relatively quickly and follow-up with in-depth analysis of the relevant areas later rather than try and do everything in detail immediately.

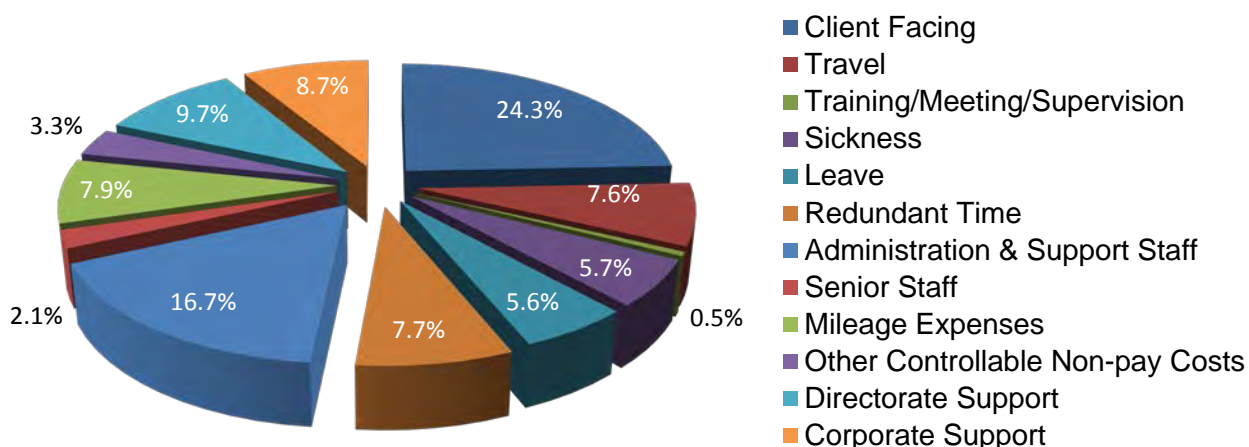

Efficiency Opportunities

The analysis of how the in-house service is spending its time is a useful starting point for investigating opportunities to improve efficiency.

In the above example, less than 50% of the direct in-house team is spent facing clients. This figure is not untypical.

When converted to costs and added to administration and support staff and non-pay costs, the picture is even more illuminating:

From an efficiency perspective, the following questions can be asked:

- Could the time lost to travel be reduced by better optimisation of the schedule? All too often we see placements made with minimal regard to the time to get from one client to another
- Could sickness levels be reduced? Whilst the nature of the work exposes care workers to more sources of illness, one council found that a lot of 'sickness' fell around bank holidays in one part of the organisation – symptomatic of either loose management and/or low morale. They were able to halve sickness levels. From a cost perspective, individuals were receiving double rate whilst 'sick'. This was compounded by the need for extra cover for this sickness which was also at double rate (Costing this council 4 times the normal rate during these periods).
- Could the amount of redundant time be reduced? In this example, when clients no longer required care for whatever reason, it was taking considerable time to reorganise time slots to make better use of the paid gaps in a carer's schedule.
- Could the administration & support staff burden be reduced? Are they doing things better done, or, even worse, already being done, by the carers themselves? Could mobile technology help with the 'paperwork'?
- Is the cost of mileage appropriate? We have come across instances where, in addition to the benefits of a car they also get the full mileage allowance normally given to those without a car.

Council employed care staff are normally on a better salary package than their external counterparts, being paid for travel time, holidays and sickness as well as getting a higher hourly rate. Our experience is that this difference accounts for between £3 and £5 per hour. The difference between in-house service costs and external service costs is typically in excess of £10 per hour. This means that in many councils there is an opportunity to make efficiencies of around £5 an hour and, in some cases, up to £10 per hour, by better management of their in-house home care service.

Unfortunately we see some councils externalising their service in one way or another in the hope that this will be fixed by a third party. There is a saying in the world of outsourcing : "Never outsource a mess". We would strongly recommend that any council considering externalising their services first analyse their service and improve its efficiency prior to such externalisation.

Appendix A: Readiness Checklist

| CSED : In-house vs External (or Reorganisation) Readiness Checklist | | | | | | | | | |
|---|---|-----------------------------------|----------------------|-------------------------|-----------------------|---------------------------|-----------------------|----------------------------|-----------------------|
| Reasons for considering reorganising/externalising | Enhance effectiveness by focussing on what you do best | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Increase flexibility to meet changing requirements | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Enable a broader transformation agenda | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Improve service user satisfaction | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Improve operating performance (productivity) | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Obtain expertise and skills | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Improve management and control | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Reduce investments in assets (& free up resources for other uses) | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Reduce costs through provider superior performance and lower cost structure | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Turn fixed costs into variable costs (increase flexibility) | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Overcome resistance to change | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Stated organisation policy | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Other : | Not important | | Minor objective | | Major objective | | Primary objective | |
| | Commitment to change | Proposed timescales to completion | Within next 6 months | | Within next 12 months | | Within next 18 months | | Within next 24 months |
| Level of commitment to change | | Exploring only | | Recognised need | | Commitment to change | | Commitment to outsource | |
| Alternatives considered | | Not thought about them | | Alternatives exhausted | | Informally explored | | Formally evaluated | |
| Level of organisational alignment to objectives for reorganising | | Don't know | | Within dept | | Across executive | | Across organisation | |
| Level of internal knowledge about consideration to reorganise | | Dept core team only | | Executive management | | X-functional core team | | Widely know n | |
| Level of union/staff engagement | | None | | Informal discussions | | Formal notification | | Full participation | |
| Mobilisation status | Mobilisation of reorganisation team | No-one yet allocated | | Nominated project mgr | | Nominated key leads | | Mobilised project team | |
| | Status of planning | Nothing formal | | High level outline | | Detailed draft | | Approved plan | |
| | Level of market analysis / readiness to accommodate change | Nothing yet done | | Experience led assess. | | High level analysis | | Detailed analysis | |
| | Level of market place awareness of option to reorganise | None | | Signalled possibility | | Preliminary discussions | | Initiated tendering | |
| Scope definition | Contract structure readiness (if externalising) | Nothing yet done | | Previous experience | | Outline terms | | Full contract package | |
| | Status of definition of scope under review | Verbally defined | | Written outline | | Draft specification | | Approved specification | |
| | Status of definition of organisation under review | General principles | | Affected departments | | Affected groups | | Affected individuals | |
| | Status of analysis of service users affected by review | Not yet assessed | | Volumes know n | | Groups identified | | Individuals identified | |
| | Status of communications planning | Not yet started | | Stakeholders identified | | Planning started | | Comms plan available | |
| Data readiness | Organisation / scope | Not yet started | | Intent notified | | Collection under way | | Most data available | |
| | Finance | Not yet started | | Intent notified | | Collection under way | | Most data available | |
| | HR / personnel | Not yet started | | Intent notified | | Collection under way | | Most data available | |
| | Contracts/Commissioning | Not yet started | | Intent notified | | Collection under way | | Most data available | |
| Approach | Likely level of internal cooperation with 3rd party | Not know n | | Resist / obstruct | | Low priority compliance | | High priority w illingness | |
| | Level of agreement to proposed agenda | Not acceptable | | Major changes | | Minor changes | | OK as is | |
| | No Go areas identified | Not thought about them | | Identify during visit | | Will prepare before visit | | Already know n | |

Appendix B : Terms of Reference

Please modify this document depending on your specific needs.

Location :

Date :

Sponsor :

Facilitator/s :

Overall Goal :

- To demonstrate the added value and equivalent cost of in-house home care services when compared with the current external service provision

Specific Primary Objective/s :

- To document services currently delivered by the in-house teams compared with the external market in terms of nature and mix (volume) of service category (including level of cover, out of hours comparisons, etc)
- To document and cost the amount of time spent by the in-house team (during financial year 06/07) on:
 - direct service delivery activities
 - indirect service related activities (travel, operational planning, etc)
 - other activities not directly related to home care service delivery (split by service volume related / independent of volumes)
- Identify the changes already in implementation for 07/08 and estimate the likely impact on 08/09 costs
- To document and cost the amount of time spent by the council in managing the external market and the amount of time built (explicitly or implicitly) into contracts for indirect service related activity
- To document relative performance and quality of in-house and external providers, where possible, in terms of:
 - Inspection reports
 - User survey feed-back
 - Complaints
 - Reliability (missed visits, etc)
 - Responsiveness (acceptance / rejection of requests to deliver service)
 - Transaction efficiency

Specific Secondary Objective/s:

- To identify potential opportunities for efficiency improvement;
- To simulate alternative future scenarios:
 - Change in focus on in-house services
 - Change in mix of external services

Appendix B : Terms of Reference (continued)

Specific Deliverables:

- Service comparison matrix (with associated volumes)
- Activity / responsibility time / cost matrix
- PSS/EX internal and external home care related cost breakdown analysis (identifying service dependencies and fixed costs)
- Relative performance matrix ('balanced scorecard' principles) for in-house provision and external providers
- High level report with findings, opportunities and recommendations
- Populated version of the CSED TRACS database (for scenario planning)

Required Inputs :

- Download of individual care packages:
 - by provider, start date, end date, postcode-sector, service type (at pricing level), hours (split weekday / weekend) and cost
 - Required for both in-house and external services
 - *Any additional data will be used to refine 'what-if' scenario analysis: type of service user, responsible care manager/team, service category, etc*
- List of affected personal (along with costs) – ideally for the 06/07 period
 - Hours paid versus hours delivered
- Budget breakdown for affected cost centres (and overhead allocation apportionment)
 - To be reconciled to PSS/EX returns for both internal and external home care provision
- Performance / quality statistics per provider:
 - Number of complaints
 - Summary of user feed-back
 - CSCI inspection summary
 - No. of rejected requests for service delivery (or approx. based on % of block take-up)
 - Number of incorrect invoices
 - Care brokerage perspective on responsiveness
 - Care brokerage perspective on willingness
 - Accreditation perspective on external provision
- Input into responsibility / activity matrix:
 - Type of individual (based on personnel headings/ manager input)
 - Typical activities (based on operational manager input)
 - Compilation of time spent doing what (via a facilitated workshop involving a range of individuals from the various operational teams).
- Validation of initial analysis (via presentation / discussion with appropriate management)

Appendix B : Terms of Reference (continued)

| Terms of Reference Timetable | | |
|------------------------------|-------|--|
| Day | AM/PM | Activity |
| One | AM | <ul style="list-style-type: none"> • Sponsor discussion • Mobilisation of team • Agreement to approach |
| | PM | <ul style="list-style-type: none"> • Meetings with key managers (Home care team, brokerage) • Identification of key sources of data (both people and systems) <ul style="list-style-type: none"> ○ xxxxxxxxxxxx (team manager) ○ xxxxxxxxxxxx (brokerage) ○ xxxxxxxxxxxx (performance and stats) ○ xxxxxxxxxxxx (complaints) ○ xxxxxxxxxxxx (accounts) ○ xxxxxxxxxxxx (in-house care records) ○ xxxxxxxxxxxx (data) ○ xxxxxxxxxxxx (operational management) • Collation of initial data (organisation, staffing, data warehouse extraction) • Confirmation of approach and deliverables |
| Two | AM | <ul style="list-style-type: none"> • One-to-one meetings to collate data for analysis • Detail design / adaptation of deliverable templates |
| | PM | <ul style="list-style-type: none"> • Continued one-to-one meetings • Extracts of relevant data |
| GAP | | <ul style="list-style-type: none"> • Desktop analysis to consolidate data into format suitable for presentation • Off-line requests : clarification and/or further information |
| Three | AM | <ul style="list-style-type: none"> • Proposed for [insert date] • Completion of detailed activity / responsibility matrix involving care team • Completion of pack for feed-back / validation purposes |
| | PM | <ul style="list-style-type: none"> • Validation session • Agreement to follow-up / next steps |

Appendix C: Data Gathering

This section explains in more detail the data templates described in the Data Gathering section. It explains the type of information required and helpful hints on where to source the information.

C.1: Service Comparison

The purpose of this document is to capture any differences in the nature of services being delivered by each service provider. This is to ensure that the scope of service provision is being compared on a like basis, and that costs can be normalised to reflect any differences.

| Homecare Providers | Supplier A | Supplier B | Supplier C | Supplier D | Supplier E | Supplier F | Supplier G | Supplier H | Supplier I | Supplier K | Supplier L | Supplier M | In-House |
|--|---------------|----------------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|----------------|---------------|---------------|----------------|
| | Local | Nat | Nat | Local | Local | Regional | Local | Nat | Local | Local | Local | Regional | In-House |
| Specialist Care Types | | | | | | | | | | | | | |
| Medication | | 4 | | | | | | | | 4 | | | 4 |
| Peg Feeds | 4 | 4 | | | 4 | 4 | | | | 4 | 4 | 4 | 4 |
| Dementia Care | | 4 | | 4 | | | | | | 4 | | | 4 |

Key : Comparable service offered by external provider
 External have to take if in-house do not have the capacity

☒ External take reluctantly

C.2: Performance Comparison

The purpose of this document is to establish any differences in performance and/or quality between the providers. This might explain different amounts being paid for services. Such differences could then be factored into the internal vs external comparison.

| Carer Consistency and Skills Apr-06 - May-07 | | | | | | | | | | | | | | | | | | | | | |

Largely self-explanatory, part of this matrix requires gathering statistics from the teams responsible for quality, user surveys, performance and complaints.

As illustrated in the example, in this council, the brokerage teams were interviewed in order to obtain their feed-back – it is quite often more difficult for these teams to work with the internal processes of making placements than it is to place packages in the external market.

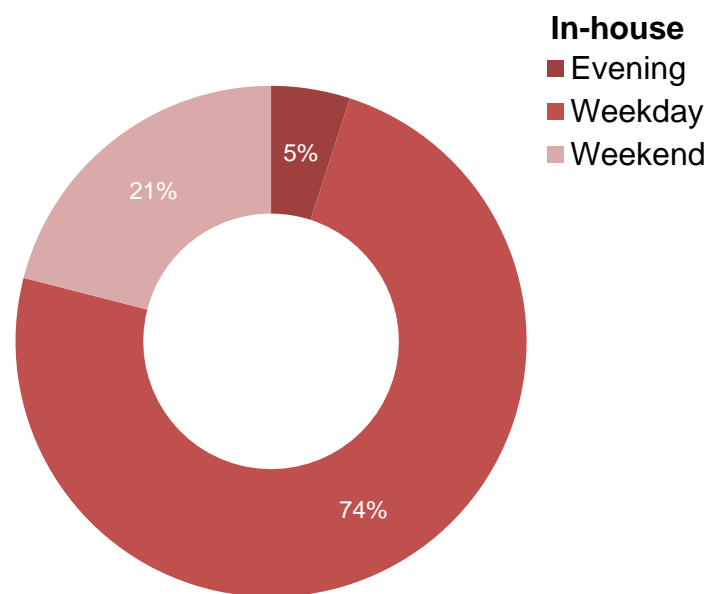

It is also worth getting the views of the teams responsible for processing timesheets (if applicable) and/or invoices. There will normally be statistics on which providers are difficult to deal with due to inaccurate invoices and so on.

As pointed out earlier this analysis can be used to inform the contract management processes.

C.3: The External Cost of In-house Services

This is used to test the hypothesis that if in-house services were externalised, external unit rates would change:

- The mix of out-of-hours activity.
- The mix in visit length (shorter visits more expensive).
- The geographical spread of activity (insufficient data).
- The service mix (if there are special services which command a premium).

C.4 In-house Retained Costs

This template is used to adjust in-house rates to reflect costs which would be retained even if the service was externalised. In other words, if we decide to externalise all or part of our service, certain costs will be retained by the local authority. This template is used to capture those costs. The analysis also lends itself to identifying areas of potential inefficiency.

| STAFF AND COSTS | | | | | | Home Care Split of Time | | | | | | | | | | | |

| | | Duty & Ext Hours | Sub-Total | 3.00 | 30,000 | 90,000 |
| | Rapid Response | Sub-Total | 9.00 | 23,889 | 215,000 | |
| | Back - Office Support | Sub-Total | 12.00 | 26,000 | 312,000 | |
| | Total | | 82.00 | 18,939 | 1,553,000 | |

This part of the matrix collects all of the teams which make up the in-house service. It is good to group these teams into client facing and back-office as a minimum. The number of FTEs could be based on a snapshot in time or on the budget head-count whichever is most appropriate. The total staff cost for each team should be available via the normal budget reports and average is just the total divided by the number of FTEs.

If staff are paid on the basis of well-known banding rates, then these numbers may not be too sensitive. However, if there are only one or two well identifiable individuals within a particular team we would recommend combining them with other 'like' teams (from the perspective of the exercise).

2 How these individuals spend their time

| STAFF AND COSTS | | | Home Care Split of Time | | | | | | | | | | | | |
|-----------------------|---------------------------------|--------|-------------------------|-------------|---------------------|----------|-------------|------------------------|----------|--------|--------|----------------|--|-------------|---------|
| Cost Centre | Name | Retain | Client Facing | Travel Time | Waiting and Standby | Meetings | Supervision | Training and Induction | Sickness | Leave | Other | Total homecare | Other business (not related to homecare) | Grand total | |
| DIRECT STAFF SALARIES | Night Wardens | | | | | | | | | | | | | | |
| | Carers | | | | | | | | | | | | | | |
| | Duty & Ext Hours | 4 | | | | | | | | | | | | | |
| | Rapid Response | 4 | | | | | | | | | | | | | |
| | Management Team | 4 | | | | | | | | | | | | | |

| | Homecare Assistant Co-ordinator | 4 | | | | | | | | | | | | | |
| | Business Support | 4 | | | | | | | | | | | | | |
| | Client Facing Teams | | | | | | | | | | | | | | |
| | Duty & Ext Hours | | | | | | | | | | | | | | |
| | Rapid Response | | | | | | | | | | | | | | |
| | Back - Office Support | | | | | | | | | | | | | | |
| | Total | | | 84,000 | 28,000 | 3,000 | 1,000 | 200 | 4,000 | 15,000 | 16,000 | 0 | 151,200 | 0 | 151,200 |

If you have a time monitoring system in place, you will be able to break out these activities based upon electronic records. In practice many of you will not have this information and, at best, in the case of homecare, you may only have access to care plan records or their equivalent.

We have found that getting the right people in the room will give a good idea of how the different teams spend their time. The key ratio is the ratio of client facing time versus other activity. Our experience is that is not uncommon to have 50% client facing and the rest lost in other (from the perspective of the client, non-value added) activities.

This analysis looks at this breakdown from a time perspective. Quite often the ratio is even lower when reviewed from a cost perspective. This is because some of these activities consume a disproportionate amount of the cost.

In addition to providing a basis for understanding how much time is spent on activities which would be retained, this part of the analysis provides the baseline for efficiency opportunities. Based on our experience so far there is usually scope to improve in-house efficiency by at least 10%.

3 Other labour / direct service related costs

|--------------------|------------------------------|--|-----------|------------------|------------------|
| INDIRECT HOME CARE | Home Care Teams | Sub-Total (all expenses not just salaries) | 1,800,000 | 18,000 | |
| | Home Care Support | Sub-Total (all expenses not just salaries) | 12,000 | 55,000 | |
| | External Home Care | Sub-Total (all expenses not just salaries) | 161,000 | 5,800,000 | |
| | Home Care Brokerage Team | Sub-Total (all expenses not just salaries) | 79,000 | 53,000 | |
| | Mgt Team Older People | Sub-Total (all expenses not just salaries) | 16,000 | 1,000 | |
| | Community Rehab Team | Sub-Total (all expenses not just salaries) | 25,000 | 0 | |
| | Strategic management | Director and interdependent administration | | | |
| | | Registration and inspection | | | |
| | | Complaints procedures | | | |
| | Assessment & Care Management | Package arrangement (if interdependent) | | | |
| | | Reviewing quality (if interdependent) | | | |
| | Support Services | Finance, IT, HR, Legal, Procurement, Corp | | | |
| | Total | | | 2,093,000 | 5,927,000 |

This part of the matrix focuses on other associated service/labour costs. As can be seen from the above example, some of these costs (e.g. home care brokerage team) have been allocated to the in-house team disproportionately. When it comes to applying the retained costs logic some of these costs will be seen to be ‘retained’.

4 Allocated costs

| | | | INTERNAL | EXTERNAL | |
|--------------------|------------------|-----------------------------------|---|-----------|-----------|
| COSTS WITHIN PSSEX | Group 1 | Salary & Wages | Salaries (inc Agency Staff) | 1,600,000 | 39,000 |
| | Group 1 | Salary Burden | NI, etc | 98,000 | 900 |
| | Group 1 | Indirect Employee Expenses | Training, Advertising, Severance, etc | 470,000 | 10,000 |
| | Group 2 | Premises-Related Expenditure | Utilities, Fixtures, Maintenance, etc | -100 | 20,000 |
| | Group 3 | Transport-Related Expenditure | Transport costs, Leases, Public Transport | -7,000 | 500 |
| | Group 4 | Supplies | Equipment, furniture, etc (inc Print) | 0 | 49,000 |
| | Group 4 | Home Care Services | Home care services | 0 | 5,800,000 |
| | Group 4 | Other Services | Other services excluding home care | -81,000 | 41,000 |
| | Group 5 | Third Pary Payments | Voluntary associations, etc | 0 | 297,000 |
| | Group 6 | Transfer Payments | Direct payments | 0 | 0 |
| Group 7 | Support Services | Finance, IT, HR, Procurement, etc | 0 | 0 | |
| Total | | Per PSS/EX Return | 2,079,900 | 6,257,400 | |

The final part of the input is designed to make the accounting slightly more visible. The headings reflect those available via the CIPFA Best Value Accounting Code of Practice (BVACOP) and should be available from the finance team.

It can prove difficult to get these numbers because they provide a mechanism by which councils can re-allocate costs and are therefore sometimes seen to be sensitive. However, given that they end up in publically available figures (the PSS EX1 return), it is important to understand these costs from two perspectives;

- Are they over or under-stated (note the Transport Related expenditure in this real – although well out of date – example);
- Would they be retained if the service were to be externalised

Retained Costs

Throughout the above examples there are red dots on various parts of the matrix. The red dots signify what this council considered to be areas of retained costs. Some of these will be obvious (such as some of the corporately allocated costs), however, others represent a strategic decision (keeping the rapid response team in-house, in this example).

What the matrix does is display the visibility of these costs. More often than not at least 30% of costs of an in-house service would be retained if the service were to be externalised.
